2018 IEEE International Geoscience and Remote Sensing

An aerosol is defined as a suspension system of solid or liquid particles in a gas. An aerosol includes both the particles and the suspending gas, which is usually air. Frederick G. Donnan presumably first used the term aerosol during World War I to describe an aero-solution, clouds of microscopic particles in air. This term developed analogously to the term hydrosol, a colloid system with ...

For many other applications involving image classification and change detection, atmospheric correction is unnecessary. A typical example of a remote sensing application for which atmospheric correction is not necessary is image classification with a maximum likelihood classifier using a single date image.

Classification and Change Detection Using Landsat TM Data

Aerosol observations and analysis is one of thematic foci within the GAW Programme. The GAW Aerosol Programme strives "to determine the spatio-temporal distribution of aerosol properties related to climate forcing and air quality up to multidecadal time scales".

Condensed aerosol fire suppression is a particle-based form of fire extinction similar to gaseous fire suppression or dry chemical fire extinction. The aerosol employs a fire extinguishing agent consisting of very fine solid particles and gaseous matter to extinguish fires.

La télédétection par laser ou lidar, acronyme de l'expression en langue anglaise « light detection and ranging » ou « laser detection and ranging » (soit en français « détection et estimation de la distance par la lumière » ou « par laser »), est une technique de mesure de distance fondée sur l'analyse des propriétés d'un faisceau de lumière renvoyé vers son émetteur.

Abstract. A gap in emission inventories of urban volatile organic compound (VOC) sources, which contribute to regional ozone and aerosol burdens, has increased as transportation emissions in the United States and Europe have declined rapidly.

Volatile chemical products emerging as largest

3. Methodology. In order to find out the requirements for the deliverables of the Working Group, use cases were collected. For the purpose of the Working Group, a use case is a story that describes challenges with respect to spatial data on the Web for existing or envisaged information systems.
