social network based recommender pdf
Social network analysis (SNA) is the process of investigating social structures through the use of networks and graph theory. It characterizes networked structures in terms of nodes (individual actors, people, or things within the network) and the ties, edges, or links (relationships or interactions) that connect them. Examples of social structures commonly visualized through social network ...

A recommender system or a recommendation system (sometimes replacing "system" with a synonym such as platform or engine) is a subclass of information filtering system that seeks to predict the "rating" or "preference" a user would give to an item.. Recommender systems are utilized in a variety of areas including movies, music, news, books, research articles, search queries, social tags, and ...

Recommender system - Wikipedia
4.1. Content-based filtering. Content-based technique is a domain-dependent algorithm and it emphasizes more on the analysis of the attributes of items in order to generate predictions.

Properties of the learned task representation. As hinted earlier, in adopting the FiLM perspective we implicitly introduce a notion of task representation: each task â€" be it a question about an image or a painting style to imitate â€" elicits a different set of FiLM parameters via the FiLM generator which can be understood as its representation in terms of how to modulate the FiLM-ed network.
